For Immediate Release

Take Desktop Data Anywhere with PocketCache+ and U3 Powered USB Smart Drives

SANTA CLARA, Calif., Sept. 19, 2005 – Kadena Systems Inc., a technology and licensing company specializing in data storage solutions for mobile, wireless and PC markets, today announced that a new version of its PocketCache content-backup software will be made available for U3™ powered USB smart drives. The new version, called PocketCache+, will enable mobile users to take their PC desktop files with them with the single click of a computer mouse, providing instantaneous “snapshots” of folders and files that are stored in the secure, protected workspace of a U3 powered USB smart drive. Users can instantly capture documents, pictures and files with built-in data security, all within a gum-pack size, U3 powered USB smart drive.

PocketCache+ is a new type of backup and archiving application. Unlike synchronization or conventional backup methods, PocketCache+ employs an innovative, content-based backup technology that detects minute changes in file contents and stores these in fast, highly storage-efficient “snapshots.” Due to exceptional backup efficiencies, PocketCache+ enables the typical user to back up hundreds of times onto the same drive without having to move data or make decisions about which files to retain. Content backup technology also allows contents in common to be shared among snapshots, reducing the size of most backups by 40 - 80 percent. Content sharing makes PocketCache+ ideal for capturing multiple versions and revisions of storage-intensive presentations, documents, spreadsheets and databases.

Each snapshot is kept in a comprehensive archive containing a complete “file-tree” view of folders and files at the time of backup, making it easy to find, access and restore current and

--- more ---

previous versions of files, or even files that have been deleted. Archived files are easily restored to disk, CD-RW or DVD-R with a simple “save” operation.

“U3 powered USB smart drives are the perfect complement to PocketCache+,” said Larry Kubo, president of Kadena Systems. “U3 powered USB smart drive users will love the convenience of backup and with U3 security, they can rest easy in case they lose their drives.”

“Kadena Systems’ software already has a following in the USB flash drive marketplace,” said U3 CEO Kate Purmal. “The availability of PocketCache+ on the U3 platform will simplify the installation and use of PocketCache+ for the end-user while adding a proven backup and archiving solution to the growing list of U3 compatible software.”

A free, 14-day trial version of PocketCache+ is available for download over the Internet at www.kadenasystems.com. The software will work with all U3 powered USB smart drives, which are compatible with any PC running Windows 2000 or XP. PocketCache+ will also be available for electronic purchase over the Internet for \$25 and from USB smart drive manufacturers.

About Kadena Systems

Located in Santa Clara, California, Kadena Systems is a privately held technology development and licensing company specializing in unique data storage applications for mobile, wireless, and PC markets. Company principals draw from storage industry innovators Veritas, Network Appliance, Sun Microsystems, Auspex Systems, and Adaptec. Additional information is available on the Web at www.kadenasystems.com.
