

Cruzer PocketCache™

Big Application for a Small Package

Want the perfect complement to your Cruzer®Titanium flash drive? How about an application to automatically back up newly created files and all of your important data --- instantly --- all with a single mouse click? Meet Cruzer PocketCache™ from Kadena Systems, a powerful application that uses patent-pending, data snapshot technology to copy files from your PC, and automatically stores and organizes them on your Cruzer Titanium flash drive. Cruzer PocketCache is a new kind of backup, that you can perform not just once, but over and over, on a small, portable flash drive.

Whether you're a business professional, student, or home computer user, Cruzer PocketCache is powerful, yet easy way to protect and manage your data using flash drive technology from SanDisk Corporation, the industry leader.

It's Easy: Hands-Off Backup

Unlike conventional backup methods, PocketCache stores only the changes you have made to folders or files, dramatically

reducing the storage and time required to back up your data. More important, backup is easy --- PocketCache, and not you, determines which data is stored, delivering a truly hands-off backup. Simply designate folders you want to back up as "backup selections," and PocketCache will retain them, allowing you to selectively backup your most important data, such as business, personal, financial, or digital media files. Simply click on the selection you want, and Cruzer PocketCache does the rest!

It's Powerful: Back Up Again and Again

When used for typical office documents, PocketCache is extremely storage-efficient. In fact, its ability to capture and store only new data reduces storage for documents, presentations, and spreadsheets by 40 percent or more! (Note: digital media files for photos, music and video are already stored in a compressed format and are not further reduced by PocketCache.) Thus, a 512MB Cruzer Titanium flash drive can store as much as 800 megabytes of documents when used to full capacity. Snapshots are extremely low in overhead. For example,

Features

- Powerful, data snapshot technology automatically backs up key directories and files on your PC onto your Cruzer Titanium flash drive
- Snapshot backups detect and store only changes to your data, resulting in fast, compact backup --- you can back up repeatedly for months onto the same flash drive
- View and access folders and files from all previous backups in PocketCache archive through Explorer-like viewer
- Restore or transfer files, folders or backups by simply "saving" to PC disk, CD, or DVD
- Works in the presence of other applications installed on the same flash drive.

starting at 50-percent storage capacity, most business users can back up their PC documents daily for several months without reaching the capacity of a Cruiser Titanium.

It's Simple: Accessing and Restoring Files is a Snap

Each snapshot provides a point-in-time "picture" of the folders and files you have selected for backup, organized and accessed exactly like they are from Windows Explorer. Over time, as you add, modify, and delete files, PocketCache creates a complete snapshot history or "archive" on the Cruiser flash drive.

Go too far in editing that all-important document? Accidentally over-write a file? Chances are, you have it in a recent snapshot. Restoring a file is just that --- a snap. Just go to the Cruiser PocketCache archive, and using the application menu, select and save the file to disk. Want to save a snapshot to disk, CD, DVD? It's simple. Select the snapshot or data you want to copy, and save it on the target PC. All folders and files are fully restored and ready for use.

Easy to Try, Easier to Buy

A free, 90-day trial version of Cruiser PocketCache is pre-installed on every Cruiser Titanium flash drive. To use it, simply double-

click on the application icon and follow the instructions for registration and use. At the end of 90 days, you can either purchase the application over the web at an attractive, first-time user price or order by phone or fax for a nominal, additional charge. For more information, please go to www.kadenasystems.com. In the event you elect not to purchase PocketCache, you can simply transfer all of backup data to your PC. You can't miss!

Minimum System Requirements

- Pentium PC
- Windows 98SE, 2000, ME, XP
- USB connection
