

PocketCache+™

Innovative, Single-Click Backup for USB Storage Devices

A New Type of Backup

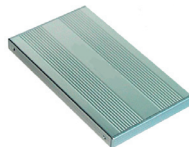

Need backup for your desktop or notebook PC? How about an application to automatically back up all of your important files and data — instantly — with a single mouse click?

PocketCache+ is a brand-new type of backup and archiving application that not only works with USB disk drives, but also with small-capacity storage devices like USB flash drives, micro-drives, CD/DVD-RW drives and secure, U3 smart drives. Unlike conventional backup or synchronization methods,

PocketCache+ uses an innovative, content-based backup technology that detects minute changes in file contents and stores these in fast, storage-efficient “snapshots” of your directories or files.

PocketCache+ snapshots enable a user to back up hundreds of times onto a small 500MB storage device, and thousands of times onto larger gigabyte storage devices—all

without having to move data or make decisions about which files to keep or replace. Snapshot backups are also fast — typically requiring only seconds after you’ve made your initial backup.

By capturing only content changes in files, the size of most backups is reduced by 40-80 percent. If you back up a picture, only a single copy is saved in your backup archive. This makes PocketCache+ ideal for capturing multiple versions and revisions of graphics-intensive presentations, documents, contracts, customer databases and large spreadsheets.

Backup Made Easy

Snapshot backups are created by first choosing a folder or directory that you want back up regularly. From then on, just point and click on the backup selection whenever you want to back up.

Because PocketCache+ stores only changes made to folders or files the time and storage needed to back up your data is dramatically reduced. More important, backup is easy — PocketCache+ delivers instant, single-click backup — there are no decisions to

Features

- Back up folders and files quickly onto your USB disk, CD/DVD, flash and U3 smart drives with unique snapshot backup technology
- Snapshot backups detect and store only the changes to files, letting you back up quickly and repeatedly onto portable, small-capacity drives
- View and access files from any previous backup in a comprehensive archive stored on your USB drive
- Restore or transfer files, folders or backups with a simple “save” to disk or CD/DVD.

make about which files to keep. It's an easy way to back up your data — whether business documents, schoolwork, or your favorite digital pictures.

Restoring Files is a Snap

Go too far in editing that all-important document? Accidentally over-write a file? Chances are, you have it in a recent snapshot.

Each snapshot is a point-in-time “picture” of the folders and files you have chosen for backup. All files in a snapshot are organized and accessed exactly like they are from Windows Explorer on the date and time taken. Over time, as you add, modify, and delete files, PocketCache+ creates a complete snapshot archive on your USB disk, CD/DVD, or flash drive, enabling you to go “back in time” to find files from earlier dates.

Restoring a file is simple. Just go to the PocketCache+ archive, and using the application menu, select and save the file to disk. Want to save a backup snapshot to disk, CD, DVD? It's simple. Select the snapshot or data you want to copy, and save it on your PC. All folders and files are fully restored and ready for use.

Easy to Try, Easier to Buy

A free, 14-day trial version of PocketCache+ is available for download at www.kadenasystems.com and at popular software download sites. At the end of your trial, you can either purchase the application over the web at an attractive price or order by phone or fax for a nominal, additional charge. For additional information, please go to www.kadenasystems.com. In the event you elect not to purchase PocketCache+, you can simply transfer all of your backup data back to your PC. You can't miss!

System Requirements

- USB storage devices including disk, CD-RW, DVD-RW drives, flash, and U3 smart drives.
- Windows 2000, ME and XP Home and XP Professional.
- USB port.
